

1. What is the relationship between the two groups?
The two groups are related by a common ancestor.

2. What is the relationship between the two species?

The two species are closely related, sharing many common traits. They likely share a recent common ancestor and have diverged relatively recently.

3. What is the relationship between the two genera?

The two genera are closely related, sharing many common traits. They likely share a recent common ancestor and have diverged relatively recently.

4. What is the relationship between the two families?

The two families are closely related, sharing many common traits. They likely share a recent common ancestor and have diverged relatively recently.

5. What is the relationship between the two orders?

The two orders are closely related, sharing many common traits. They likely share a recent common ancestor and have diverged relatively recently.

6. What is the relationship between the two classes? The two classes are closely related, sharing many common traits.

7. What is the relationship between the two phyla? The two phyla are closely related, sharing many common traits.

8. What is the relationship between the two kingdoms? The two kingdoms are closely related, sharing many common traits.

9. What is the relationship between the two domains? The two domains are closely related, sharing many common traits.

10. What is the relationship between the two groups? The two groups are related by a common ancestor.

11. What is the relationship between the two species? The two species are closely related, sharing many common traits.

12. What is the relationship between the two genera? The two genera are closely related, sharing many common traits.

13. What is the relationship between the two families? The two families are closely related, sharing many common traits.

14. What is the relationship between the two orders? The two orders are closely related, sharing many common traits.

15. What is the relationship between the two classes? The two classes are closely related, sharing many common traits.

16. What is the relationship between the two phyla? The two phyla are closely related, sharing many common traits.

17. What is the relationship between the two domains? The two domains are closely related, sharing many common traits.
